! When using electrical equipment, basic safety precautions should always be followed, including the following:

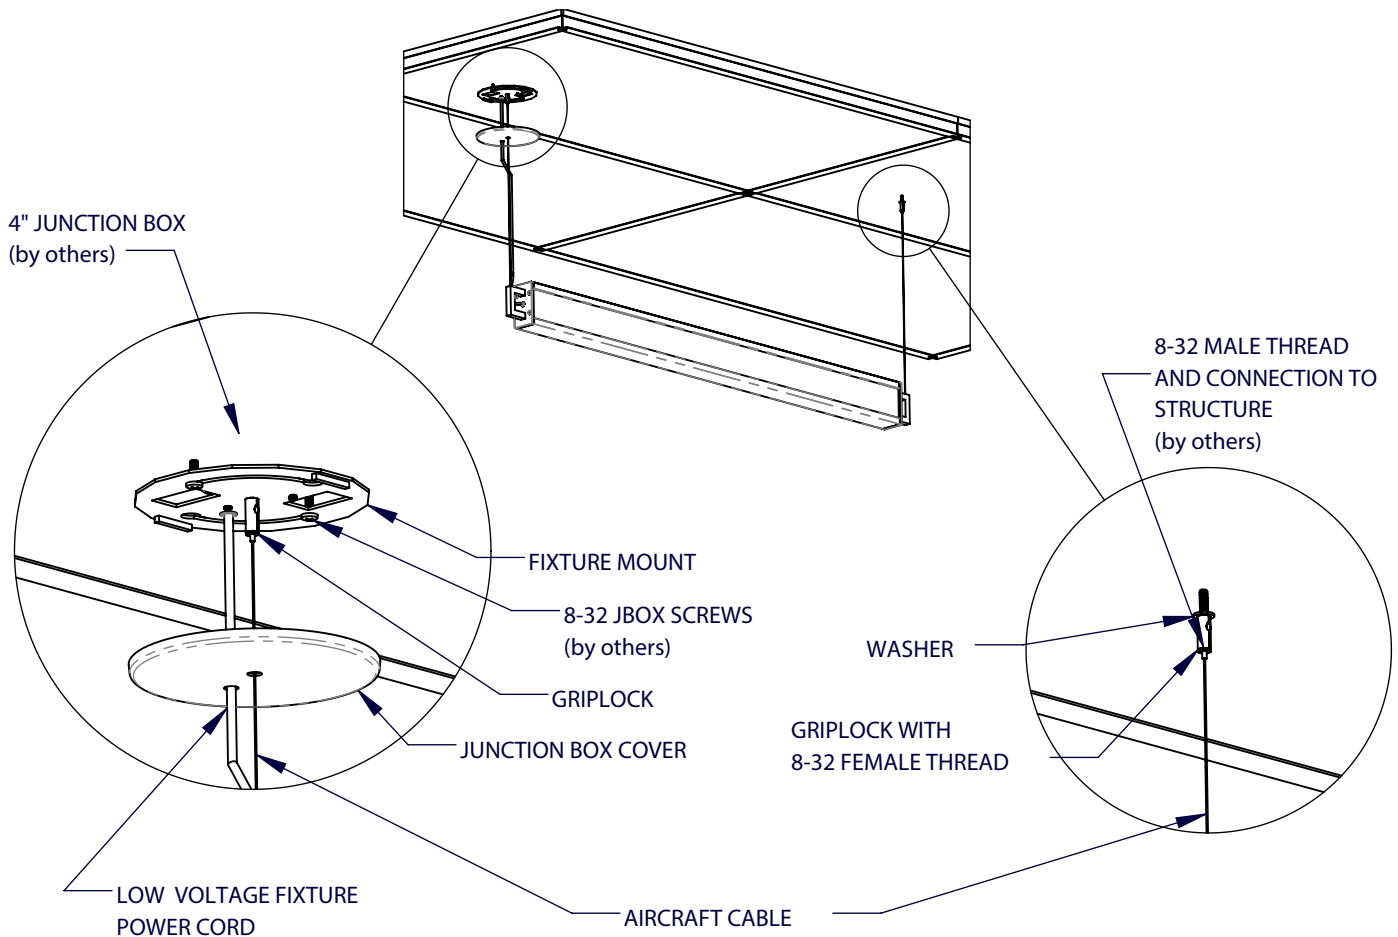

- Read all instructions carefully before installing and save for future use.
- Make sure all connections are in accordance with the National Electrical Code and local regulations.
- To avoid possible electric shock, be sure the power supply is turned off before servicing or installing the fixture.
- Service should be performed by qualified personnel.

• These instructions may not cover all details or variations. If additional information is needed, please contact Visa Lighting.

INSTALLATION:

1. Run low voltage electrical connections between junction box (by others), and RMB.
2. Attach washer and griplock with 8-32 female thread to structure.
3. Make low voltage connections within junction box.
4. Attach fixture mount to junction box using 8-32 junction box screws (by others).
5. Suspend fixture at desired height by inserting aircraft cable into griplock at both mounting ends.**
6. Adjust low voltage power cord to desired length. Trim or store excess cord within the junction box.
7. Make all electrical connections according to local and national codes.

**Excess aircraft cable can be trimmed back at either end using standard techniques at user's own risk.

When using electrical equipment, basic safety precautions should always be followed, including the following:

- Read all instructions carefully before installing and save for future use.
- Make sure all connections are in accordance with the National Electrical Code and local regulations.
- To avoid possible electric shock, be sure the power supply is turned off before servicing or installing the fixture.
- Service should be performed by qualified personnel.
- These instructions may not cover all details or variations. If additional information is needed, please contact Visa Lighting.
